

DIAGRAMAS DE FLUJO DEL PROGRAMA

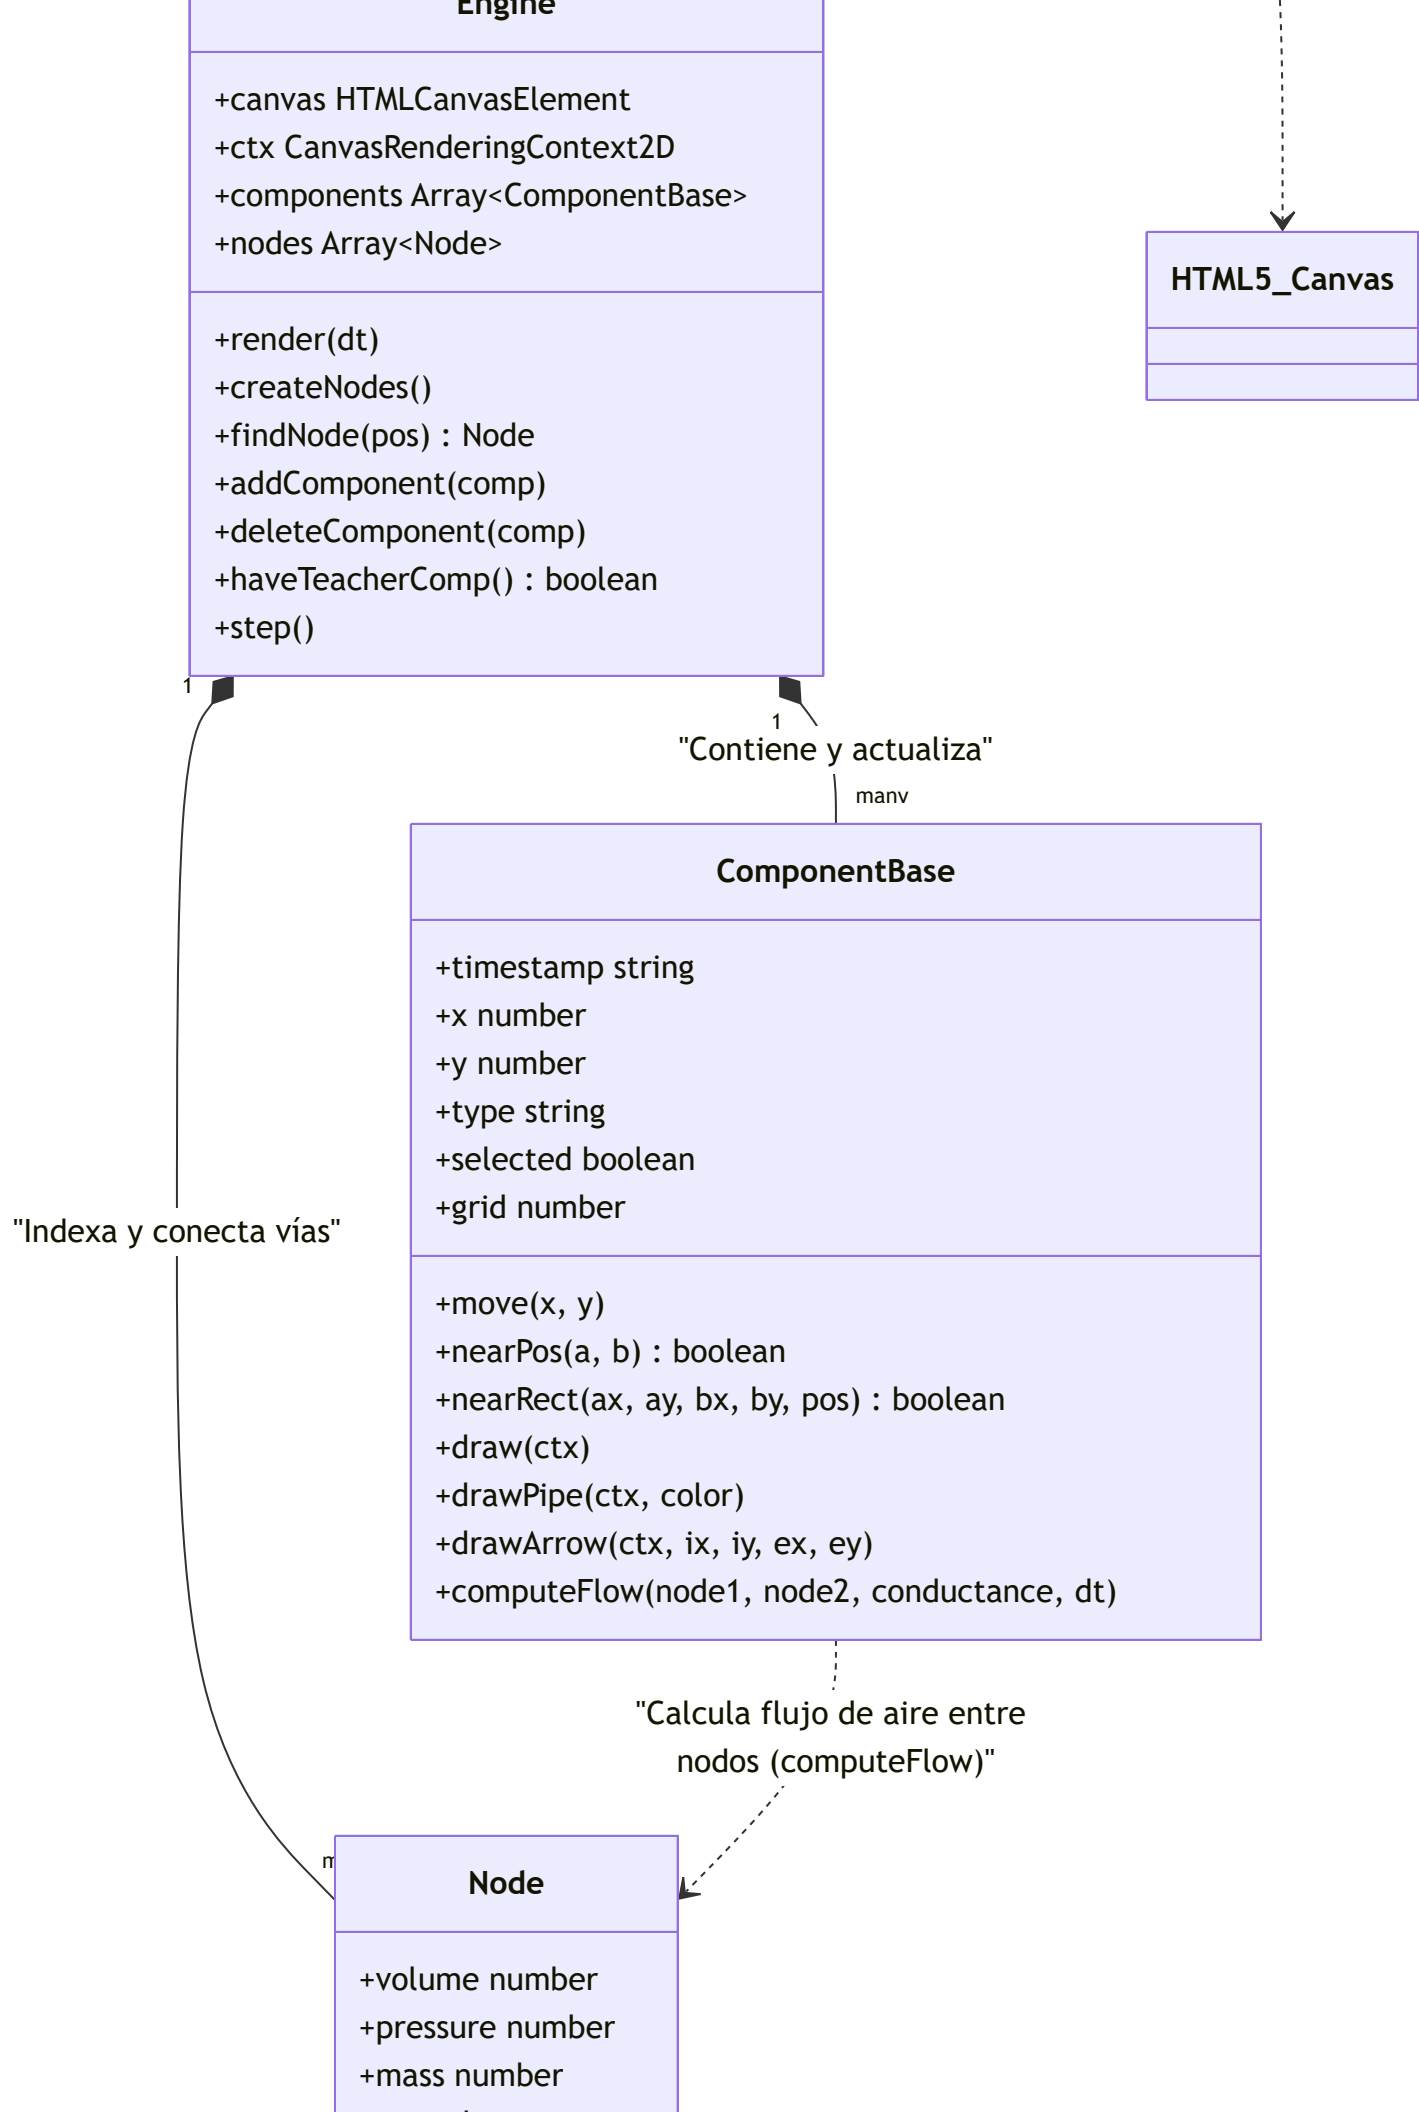

SIMULADOR DE NEUMÁTICA PICUINO

LENGUAJE DEL PROGRAMA: JAVASCRIPT

AUTOR: CARLOS FÉLIX PARDO MARTÍN

Arquitectura Global del Simulador Neumático

+x number

+y number

+addAir(q)

Control del menú de la aplicación 1

Control del menú de la aplicación 2

Componente base

1. Instanciación del Componente

2. Métodos de Estado y Colisión

Método nearPos a, b

Sí

No

Retornar true

Retornar null

Método nearRect pos

Sí

No

Retornar true

Retornar false

Método move x, y

Reajustar coordenadas con snap

3. Pipeline Gráfico / Canvas

Método drawCtx

Clase Text

1. Constructor de Clase Text

2. Métodos de Interfaz y Colisión

Método validateOptions

Método near pos

Clase Pipe

Clase Manometer

Clase Manometer

Clase Manometer

Clase Compressor

Clase ValveNret

DRAW_VALVE_NRET_FLIPPED

DRAW_VALVE_NRET

DRAW

Si

Compute Flow

No

active igual true

active igual false

Actualizar color1

Actualizar color2

Fin update

Clase ValveFlow

DRAW_VALVE_FLOW

Inicio drawValveFlow

Dibujar conducto vertical

Dibujar arco izquierdo

Dibujar arco derecho

Dibujar flecha de
regulacion

Fin

DRAW

Inicio draw

Clase ValveOr

DRAW_MOVEMENT

Inicio drawMovement

Calcular posicion del
obturador

Dibujar obturador movil

Fin

DRAW_VALVE_OR

Inicio drawValveOr

Dibujar asiento izquierdo

Dibujar asiento derecho

Clase ValveAnd

Dibujar cuerpo de valvula

Dibujar guia izquierda
superior

Dibujar guia izquierda
inferior

Dibujar guia derecha
superior

Dibujar guia derecha
inferior

Fin

DRAW_PRESSURES

Inicio drawPressures

Actualizar color2

Actualizar color3

Actualizar color1w

Actualizar color2w

Actualizar color3w

Fin update

Clase Escape

DRAW

UPDATE

Asignar presion de escape
al nodo

Actualizar masa del nodo

Fin update

Clase Cylinder1

Clase Cylinder2

PISTON_MOVEMENT_LOOP

Inicio iteracion

Calcular fuerza lado 1

Calcular fuerza lado 2

Calcular fuerza neta

Velocidad igual cero

Si

No

Aplicar friccion dinamica

Calcular cambio velocidad

Supera friccion estatica

Si

No

Aplicar friccion dinamica

Fuerza neta igual cero

Cambio en la velocidad

Clase Valve22m

DRAW_BODY

DRAW

Inicio draw

Clase Roller

Fin reset

DRAW

Inicio draw

Dibujar rectángulo base

Mostrar referencia

$\text{posY} = y - \text{shift}$

Dibujar soporte izquierdo

Dibujar soporte derecho

Dibujar rodillo exterior

Dibujar eje central

Fin draw

NEARCYLINDER

Inicio nearCylinder

Cilindro alineado
en eje Y?

Sí

Extremo del vástago
coincide con roller?

No

No

Sí

return false

return true

UPDATE

Inicio update

shift = 0

Recorrer
engine.components

Componente Cylinder1 o
Cylinder2?

No

Sí

nearCylinder(comp)?

No

Sí

Clase Valve32p

Actualizar color5

Fin update

NEARPUSHBUTTON

DRAWBODY

Actualizar color4

Fin update

DRAW_BODY

Clase Valve52p

Control de la simulación neumática engine()

Control del nodo básico neumático

1. Instanciación del Nodo

Nueva Instancia Node pos

volume = 10 (cm³)
pressure = airPressure (bar)

Calcular masa inicial:
mass = pressure * volume

Asignar Coordenadas:
x = pos.x
y = pos.y

2. Modificación de Estado (Dinámica de Fluidos)

Método addAir q

Incrementar masa:
mass += q

Recalcular presión del

nodo:

pressure = mass / volume

Control de renderizado de la pantalla

3. Método drawPosition position

Inicio drawPosition

3. Métodos Internos Core

1. Inicialización de Listeners

2. Eventos de Teclado

Control de la simulación 2
